Here's the lesson in which I had a brain fart...

Median Filter to decrease noise or blend pixels in water, clouds or even make people disappear from a scene. Shoot on a tripod. Process your RAW images. I output those to jpegs Load all images as Layers will automatically stack the images into one file. (I use Adobe Bridge to select and load). Could be tiffs. Select all stacked layers and Convert them to a Smart Object. Go to Filters > Noise > Median
